11

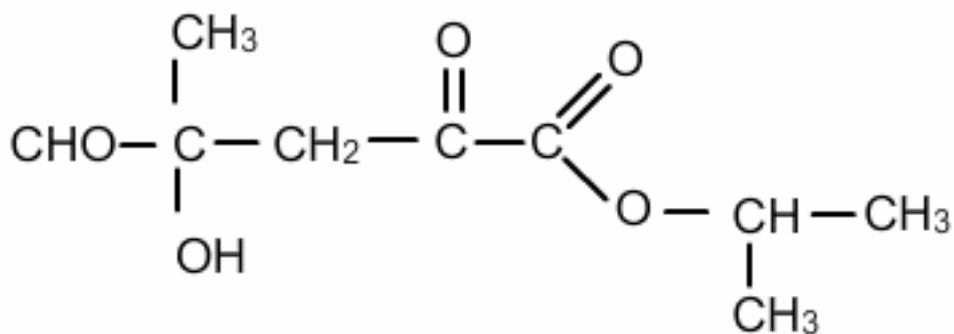

12	 <p>Chemical structure showing a cyclopentane ring connected to a carbonyl group (C=O), which is further connected to an oxygen atom, and finally to a cyclohexane ring.</p>	
13	 <p>Chemical structure showing a benzene ring connected to a carbonyl group (C=O), which is further connected to an oxygen atom, and finally to an ethyl group (CH<sub>2</sub>-CH<sub>3</sub>).</p>	
14	 <p>Chemical structure showing a cyclopentane ring with a double bond (CH<sub>2</sub>=CH) and a methyl group (CH<sub>3</sub>) attached to the ring. The ring is also connected to a carbonyl group (C=O), which is further connected to an oxygen atom, and finally to an ethyl group (CH<sub>2</sub>-CH<sub>3</sub>).</p>	
15	 <p>Chemical structure showing a carbonyl group (C=O) attached to a methyl group (CH<sub>3</sub>). The carbonyl carbon is also connected to an oxygen atom, which is further connected to a CH group. This CH group is part of a vinyl group (CH=CH<sub>2</sub>) and is also connected to another oxygen atom, which is further connected to a methyl group (CH<sub>3</sub>).</p>	
16	 <p>Chemical structure showing a carbonyl group (C=O) attached to a hydrogen atom (H). The carbonyl carbon is also connected to a CH group, which is further connected to a CH group. This CH group has a hydroxyl group (OH) attached to it. The CH group is also connected to a CH<sub>2</sub> group, which is further connected to a carbonyl group (C=O). This carbonyl carbon is also connected to an oxygen atom, which is further connected to an ethyl group (CH<sub>2</sub>-CH<sub>3</sub>). The CH group also has a methyl group (CH<sub>3</sub>) attached to it.</p>
